Marigold

Livingston's New Full "Carnation-Flowered"
"Yellow Supreme"

GOLD MEDAL WINNER for 1935
In the All-America Flower Selections

Developed and Introduced by Livingston's

Visualize, if you can, a three to four inch, fluffy, well-rounded bloom of delicately mild honey fragrance, with broad, loose, frilled petals of a rich, creamy lemon-yellow color, and you have a fair conception of our 1935 GOLD MEDAL WINNING Marigold "YELLOW SUPREME." You'll truly enjoy its dazzling beauty.

Unsurpassed as a cut-flower and exhibition variety as testified by many growers and Garden Clubs who tried it last year. Holds decided freshness fully a week to 10 days. In water 48 to 72 hours it takes on an even more delightful color and, if possible, a more graceful form. Its future as a garden and cut-flower favorite is assured.

Plants are 24 to 30 inches tall, remarkably healthy, vigorous and free branching with foliage which is practically free from that objectionable Marigold odor. Having been originated and bred in Ohio it is fully acclimated to Northern climatic conditions and does just as satisfactorily in Southern sections. For a real thrill grow it this year. You will have a delightful surprise.

Livingston's "True Blue" Seeds Have

Hidden Values

THAT WILL STRETCH YOUR SEED DOLLAR

Please read this carefully—because it may favorably affect your Garden Program

If seeds were like machinery, it would be possible to take them apart and show you their "Hidden Values." But, since this cannot be done, we must literally take them apart with words to show you that Livingston's Seeds have superior values that will save money for you. Again we wish to visit you and if you don't mind we are bringing along a few customers whose statements are unsolicited by us.

Question 1. What do you mean by "Hidden Values" that will stretch my seed dollar?

Answer. When you plant Livingston's "True Blue" seeds the money you spent stretches because you get more plants through better germination; it stretches because you get higher purity, greater productivity and better adaptability to given conditions made possible by our rigid trial ground tests. In seeds these things are "Hidden Values" that cannot be seen except through use.

Iowa Answer. Opal Marquardt, Union County, "Your seeds show better germination than those from four other companies."

Oregon Answer. W. H. Hubbard, Yamhill County, Oregon, "Germination has been as near 100% as could be asked and varieties all true to name."

Ohio Answer. Mrs. Chas. Ackerman, Champaign Co., "Bought seeds from you last year and had best yield I have ever had."

Illinois Answer. Mr. Chas. Marion, Will Co., "Seeds I got from you last year were all any one could expect."

Question 2. All seeds have these values that you mention, don't they?

Answer. Yes, in variable degrees. This variation determines their value; therefore it always pays to think beyond the catalog price. With a background of experience through three generations (85 years) isn't it reasonable to believe that we have learned many valuable things about seed growing? These things have been conscientiously bred into the seeds we supply you.

New York Answer. Mr. Everett Ackerly, Rockland County, "Have tried all the seed companies in U.S.A. and am back to you, just where I started from. I get better results with your seeds than others."

Kentucky Answer. Mr. L. S. Moles, Floyd County, "The best garden I ever raised was from your seed."

Michigan Answer. Mr. Roy E. Nace, Berrien County, "Your prices plus quality pleases us."

Question 3. Thinking beyond the catalog price, what about postage cost and the time it takes to get my seed by mail?

Answer. When you buy seed from Livingston's you have no postage to pay. We pay it regardless of amount or distance, as outlined below. Being centrally located as to population, we can reach a large percentage of our customers almost overnight.

Important Ordering Suggestions

FREE TRANSPORTATION ON ALL SEED ANYWHERE IN THE UNITED STATES PROPER

All seeds quoted in this Catalog are now shipped by Parcel Post, Express or Freight, whichever rate is lower, all transportation and packing charges paid by us. The only items on which you must figure or pay transportation are those marked "Not post-paid," and they are few. C.O.D. and money order return fees are not considered as transportation charges and, therefore, must be paid for by the customer. Avoid them by sending remittance with order. Bulk seeds, such as Peas, Beans and Corn, in quantities, are shipped to your nearest express or freight office, transportation paid. If you wish them shipped by Parcel Post, please send necessary postage.

SHIPPING ORDERS. When goods are to be shipped by Freight or Express, give plain shipping directions; otherwise we use our best judgment in routing. Goods on which we pay transportation are shipped at our option.

SEND MONEY. Remittance should always accompany the order. Remittances may be made at our risk by any of the following methods (1st and best) Post Office Order; (2d) Bank Draft; (3d) Express Company Money Order; (4th) Cash by Express in amounts not less than \$50 (5th) Registered Letters. We also accept stamps in payment but the Postal Department asks us to discourage their use.

AN ORDER BLANK and ENVELOPE are in the rear of this

Georgia Answer. Mr. Jack Bennett, Pike County, "I have never ordered anything that was returned so quickly."

Indiana Answer. Mrs. A. W. Dileo, St. Joseph County, "Order received in three days and all are growing. Thanks a lot."

Missouri Answer. Mr. Bismarck Reynolds, Jackson County, "Like your seeds and prompt service."

Question 4. Do you test your seeds by growing them in a garden the same as I will do?

Answer. Yes, we are one of the few seedsmen who operate big trial grounds and through these trials we know, within a reasonable certainty, that our seeds will be satisfactory in your garden.

Massachusetts Answer. Mr. Arthur Fales Worcester Co., "47 years doing business with you and not a kick."

Colorado Answer. Nina Buttler, Las Animas County, "I never buy any but your seed. They come up 100%, I believe."

Question 5. Big commercial gardeners usually have fine vegetables. They must use good seed. Can I buy the same kind of seed?

Answer. Livingston's started in the seed business in 1850 by growing and supplying seeds to the commercial grower. Today this is the largest branch of our business. You get the same quality seed for your garden because there is only one grade of "True Blue" seeds.

North Dakota Answer. Mr. Chas. Benzi, McLean County, "The Market Gardener will never forget a firm from whom he can get good seed with certainty. Price is no objection."

Connecticut Answer. Mrs. Florence Johnson, Fairfield County, "They speak of our market as the stand where they grow the wonderful tomatoes. I want you to know we give Livingston's full credit for their good seed."

Question 6. Besides supplying me with quality seeds, how can you help me with my garden problems?

Answer. We believe this catalog is one of the most instructive you will receive this year. It gives an accurate vegetable planting chart and unique, complete flower cultures not found in other books. We also supply free with orders detailed leaflets on many subjects. In addition to this, we offer a free letter service, answering your questions in a practical, dependable way. Where can you do better?

Kentucky Answer. Miss Alma Sinclair, Jefferson County, "Thank you for the chart you sent me and all other literature. It has meant everything to us."

California Answer. Gladys Burch, Sacramento County, "The codes and symbols make your book the most useful of any I have. I will be a booster for you."

Livingston's "Hidden Values" plus Livingston's service will positively make a difference and your seed dollar is surely stretched. We urge you to decide now to have a Livingston "True Blue" garden this year.

Catalog for your convenience. Additional Order Blanks and Envelopes will be sent on request. Print or write your Name, Post-Office, County, and State plainly. If you have moved, give us your old address and we will change our mailing-list.

WE GUARANTEE the safe arrival of your order. We guarantee to refund your money or give value in other seed if, after properly testing, our seeds fail to grow. Our germination test is printed on all packages (not packets) we send out.

NON-WARRANTY. Contingencies continually arising prevent the very best seeds always giving satisfaction. For these reasons, it is impossible to guarantee seeds under all circumstances; therefore We, The Livingston Seed Company, give no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs, or plants we sell, and will not be in any way responsible for the crop.

PARCEL POST RATES. Where you must remit postage ask your postman what zone you are in from Columbus, and using the figures under that zone, multiply the number of pounds by the first figure and add the second and remit that amount in cents. Fractions of a cent count as a full cent.

GLADIOLUS CULTURE

Spade or plow your plot of ground rather deep, pulverizing it well. If it is a heavy clay soil or one having considerably insufficient fertility the use of fertilizer is advisable. We suggest manure or any good commercial fertilizer. This should be well spaded into the ground before planting. If your soil is good garden loam this application may not be necessary. However, we recommend that a quantity of either of the above fertilizers or Bone Meal be put in the furrow or hole where the bulb is to be placed and covered with 1 inch of soil before the bulb is planted.

The bulbs should be planted about 5 inches deep in rows two feet apart, being placed 3 inches apart in the row. In clump or group planting they should be placed about 6 inches apart each way. Small bulbs should not be planted quite so deep. Start cultivation as soon as the spikes begin to appear. Stir the surface frequently and keep free from weeds. If the season is dry, water frequently and freely. A planting at intervals of 10 days up until July 1 will give a succession of bloom all summer. Cuttings should be made 8 inches above the ground when two complete blooms have appeared.

After the flowers are cut the bulbs should remain in the ground until the end of September or even into October, depending upon the time they were planted, so that they may attain their full growth. By all means remove them from the ground before freezing weather, cut off the tops and after curing, either out of doors or inside, store them in your basement or a place of moderate temperature for the winter.

INTRODUCING · · Livingston's Serial Picture Story

Mr. Alexander W. Livingston, deceased, founded our Company in 1850. It is now operated by the third generation and the future is assured. Under a policy of "Honest Dealings," the business has prospered for the past 85 years, during which time it has been necessary to move to larger quarters several times. The present home, pictured here, is centrally located, just next door

to the Parcel Post and Express stations, thus affording quick, overnight service to a large percentage of the people in the United States.

Livingston's are one of the few seedsmen that operate big trial grounds, portions of which are pictured here. Both vegetable and flower seeds are tested under actual growing conditions every year.

How to Succeed with Flowers

For Success with Flowers Demand
QUALITY SEED

Your success with flowers depends largely upon the quality of the seed you buy and the proper method of growing the plants. There is a difference in the germinating and productivity qualities of flower seeds. If the amount you invest in flower seeds is invested in quality rather than quantity, there is no doubt but that you will have better success.

We both know that seed cannot be exempt from all blame for poor results. The most common cause of failure with flowers is the lack of knowledge in properly growing and caring for seedlings. Being successful is easy if you know a few fundamental principles.

Annuals bloom the same year and die and can usually be started from seed sown directly in the garden in the spring, although earlier bloom can be enjoyed by starting most of them inside. Biennials generally do not bloom until the second season, then die. Most of these can be sown directly in the garden. Some, if started early inside, will bloom the first year. Perennials, including most rock-plants, are hardy, endure winter weather for several seasons and start blooming the second season in the spring. They should be started in flats or boxes any time from late spring to September 1st and set out in the garden in the fall.

Throughout the flower seed section we have endeavored to give you enough information about each variety offered so that you may know whether it is an annual (*a*), biennial (*b*), perennial (*p*), etc. (See key to symbols on opposite page.) We also give its height, whether it prefers sun, partial shade or shade, blooming period in months, where it can be used to best advantage and its proper culture (see opposite page), including the depth to sow the seed.

Too much emphasis cannot be given to the depth to sow seed. Common advice usually given is "Sow seed shallow" and while this is good it is too general. Under each variety heading we are giving, in parts of inches, the depth to sow the seed.

Sowing Seed in the Garden

After frost is out of the ground it should be dug and broken up to a depth of at least 9 inches, mixing in plant food if necessary. Pulverize the top soil well and sow the seed evenly, covering as directed herein. Keep the soil at as even moisture as possible until the little plants appear. Thin or transplant as necessary to prevent crowding. Water thoroughly every few days instead of a light sprinkling every day and cultivate often to keep down weeds and to retain moisture in soil.

Growing Seedlings Inside

The ideal box for growing both flower and vegetable seedlings is a window flat about 3 to 4 inches deep. Where you do not want many plants, any shallow box (a cigar box is ideal) will do very well. In any event, place holes in the bottom for drainage. Fill to a depth of 1 inch with cinders or gravel, and the remainder with good, well sifted garden loam to within $\frac{1}{4}$ inch of the top and firm down.

Follow directions given under each variety heading as to the depth to sow the seed. After it is sown, place the box in a pan of water and let the water be absorbed from the bottom until the top soil shows moist. Let the surplus water drain out of the bottom, after which place it in a window, preferably with southern exposure, and cover top with glass or heavy paper. Turn this cover several times a day to prevent moisture forming. As soon as the seeds have germinated, remove the cover. Give the seedlings as much air and sunshine as possible but shade them from the noon sun if it is extremely hot. After the plants are well up, keep them cool rather than warm, and grow them slowly. The soil should be kept moist but not wet. This should be done with bottom moisture as above. Before the plants are transplanted into the garden, they should be hardened off. On mild days expose them to the outdoors and they will soon be able to stand the outside weather without injury.

All perennial flowers can be started in these same boxes, but with fresh soil, except that the box is placed outdoors in a cool, shaded location.

The Cause of "Damping Off"

"Damping off" and Rots of seedlings are actually caused by living germs that live in the soil. When seeds are sown in soil containing germs, they become parasites and attack the young roots as soon as they have sprouted. If the seedlings are not killed before they emerge they are attacked again at the soil level and topple over and die. Attention to proper moisture, ventilation and transplanting to prevent overcrowding tends to decrease this disease. The most successful way of combating it is to sterilize the soil with Ansul Dust. (Offered on page 14.)

Transplanting Seedlings in the Garden

A few hours previous to transplanting, water both the seedling box and the soil outside. With a fork carefully loosen and remove the seedlings disturbing roots as little as possible and keeping them from the air. Transplant them a little deeper than they were before, firm down the soil and protect them against direct sun for a day or two until acclimated to conditions.

Cultural Directions for Flowers

Under each flower variety heading on the following pages you will find keyed references which refer to the information given below. These keys indicate whether the variety is an annual, perennial, etc., and what culture it takes. The depth to sow the seed is also given. This same information is given on each packet we send you. The depth you sow the seed is very important. Lack of this information has been a common cause of failure with flowers. We hope the simplified way we tell you "how" contributes to your success with flowers this year.

Culture A.—Sow seed inside in shallow box of light, well pulverized, moist soil in early spring. Cover to depth as indicated under variety heading herein and firm soil with board. Cover box with glass or paper and place in warm location until germination. After germination, remove cover, supply bottom moisture and place in sunny window. When large enough to handle, thin or transplant 2 inches apart in other boxes and gradually expose to outside conditions. Plant outside after danger of frost. This seed may also be sown outside in the garden in well pulverized soil after frost.

Culture B.—Sow seed outside in well pulverized soil after the last killing frost. Cover to depth indicated under variety heading herein, firm soil and keep moist. Thin or transplant as necessary. If earlier bloom is desired, sow seed inside in shallow box of light, well pulverized, moist soil in early spring. Cover to proper depth and firm soil. Cover box until germination, after which remove cover, supply bottom moisture and place in sunny window. Thin or transplant to other boxes and plant outside after frost.

Culture C.—Sow seed thinly outside in the garden in well pulverized soil after last killing frost. Cover to depth indicated under variety heading herein, firm soil and keep moist. Thin out as necessary so that plants are not crowded. It is best to sow this seed where the plants are to remain as they do not transplant very successfully.

Culture D.—Sow seed outside in early spring as soon as the soil can be well pulverized. Cover to depth indicated under variety heading herein, firm soil and keep moist. Thin or transplant as necessary. For very early bloom, sow outside in late fall just before freezing weather, or can be started quite early inside in box as in culture A and transplanted outside after frost.

Culture E.—Sow seed inside in shallow box of well pulverized moist soil, preferably during spring months. Cover to depth indicated under variety headings herein and firm soil with board. Cover box and place in warm location until germination, after which remove cover, supply bottom moisture and place in sunny window. When large enough to handle, transplant to pots and shift to larger pots as necessary.

KEY TO SYMBOLS

a **Annuals.** Attain full growth from seed in one year, bloom and die.

b **Biennials.** Generally bloom second year, then die. Some planted early, bloom same year.

p **Perennials.** Endure winters. Live and bloom several seasons.

ra **Rock-Garden Annual.** Usually of dwarf growth.

rp **Rock-Garden Perennial.** Hardy, dwarf growth.

h **House Plants.** Mostly grown inside the year around. Some bloom outside in summer.

ca **Climbing Annual.**

cp **Climbing Perennial.**

Culture F.—Sow seed inside in shallow box of light, well pulverized, moist soil in late winter. Cover seed to depth indicated under variety headings herein and firm with board. Cover box until germination, after which supply bottom moisture and place in sunny window. When large enough to handle, transplant 2 inches apart in other boxes and plant outside after frost is out of the ground. For earlier blooms, sow seed in fall, carry over in cold frame and plant out in spring. June sown seed will bloom in fall.

Culture G.—Sow seed inside in shallow box of well pulverized, moist soil in early spring. Cover to depth indicated under variety headings herein and firm soil. Cover box until germination, after which supply bottom moisture and place in sunny window. When large enough to handle, transplant 2 inches apart in other boxes. When 2 to 3 inches high, shift to pots or can be planted outside after frost.

Culture H.—Sow seed inside in shallow box of well pulverized, moist soil in early spring. Cover seed to depth indicated under variety headings herein and firm soil. Cover box until germination, after which supply bottom moisture and place in sunny window. When plants are large enough to handle, transplant 2 inches apart in other boxes. Plant outside after frost. In the fall take up roots and store in cool, dry place. Seed can also be sown outside after frost.

Culture J.—Sow seed thinly in shallow box of well pulverized moist soil after frost and any time up to August or September 1st. Cover seed to depth indicated under variety headings herein and firm soil with board. Place in cool, shaded outdoor location; after germination, supply bottom moisture. Thin as necessary and transplant to permanent location when large enough to handle. Give protection the first winter. This seed can also be sown in the fall as above, transplanted into coldframes where it is carried through the winter, and planted out in the spring.

Culture K.—Sow seed thinly outside in well pulverized soil in early spring and any time during summer. Cover seed to depth indicated under variety headings herein, firm soil and keep moist. Thin out as necessary. Seed should be sown where plants are to remain as they do not transplant very successfully. Provide protection the first winter. Usually do not bloom until second season.

Livingston's Serial Picture Story—Continued from page 10.

Livingston's latest contribution to the flower world is a New Double Morning Glory "White Beauty," which is being offered this year for the first time. A large trellis, grown at our farms for seed purposes, is pictured here.

Livingston's operate big flower trial grounds every year. These trials include most all of the standard

varieties from the mammoth sized Zinnias to the small and popular Portulacas, both pictured next below. All the promising new things in flowers are also grown. Trials of Livingston's New All-double Giant Fringed Petunia, the only all double strain introduced to date, are shown below. For the past three season this Petunia has created a sensation among flower growers.

(Continued on page 26.)

Everything New

Culture A. Sow seed $\frac{1}{8}$ inch deep. Hgt. 15 to 30 in.; partial shade.

Asters do best in rich soil with ample moisture. Set plants of earlier sorts 10 inches apart and later sorts 15 to 18 inches apart.

If You Love Asters Try Our New Wilt-Resistant Strains

The most pretentious Aster improvement ever accomplished and a boon to the amateur gardener. While Aster Wilt (*Fusarium Wilt*) in recent years made it almost impossible to obtain any degree of success, these new strains should again give the Aster its deserved place in the flower world.

They are practically immune to wilt but are not resistant to "Yellows." Many customers have written us concerning their success with them in 1934. This year we have added some more new colors. Please note that all varieties that are wilt-resistant are so indicated directly following the variety name.

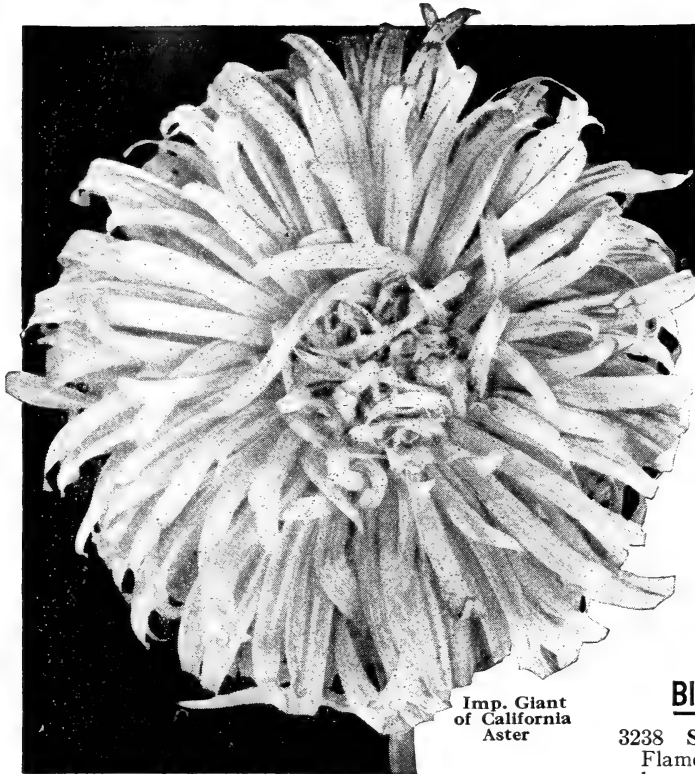

Blue Flame—Wilt-resistant Strain

3238 **Something** entirely new in Asters. Blue Flame is of the Giant Branching Comet class, with large, comet type flowers, fully double on branching plants. The color is a bright navy blue, distinct from any other dark blue or purple aster now offered. Pkt. 25 cts.; $\frac{1}{16}$ oz. 45 cts.; $\frac{1}{8}$ oz. 75 cts.

Golden Sheaf—Wilt-resistant Strain

3295 **New**. The deepest yellow aster yet offered and the only one that is wilt-resistant. The flowers are fully double with crest-like center, of good substance and depth of petal. Illustrated and more fully described on page 4. Pkt. 25 cts.; $\frac{1}{16}$ oz. 50 cts.; $\frac{1}{8}$ oz. 90 cts.

Hardy Lilies From Seed

3890 REGALE. This Lily is absolutely hardy, and is excellent for forcing. The flowers are white, slightly suffused with pink, with a beautiful shade of canary-yellow at the center, and extending part way up the trumpet. It is delightfully perfumed, reminding one of the jasmine, and lacking the heavy oppressive odor of most Lilies. Blooms outdoors early in July, and seedling bulbs will flower the second year. The seeds can be sown inside during spring months or in flats in the greenhouse at any time, giving the same treatment as tomato seed, and lined outside in rows about 4 inches apart as soon as weather permits. These will do well in any soil with good drainage and will give you a blooming size bulb the second year. It will be necessary to lift the bulbs grown from seed the first year, just after the first killing frost in the fall, and plant them back immediately in order to get them 4 to 6 inches deep. Pkt. 10 cts.; $\frac{1}{8}$ oz. 25 cts.; $\frac{1}{4}$ oz. 45 cts.

HAVE A LIVINGSTON "TRUE BLUE" GARDEN THIS YEAR

Culture F. Sow seed $\frac{1}{8}$ inch deep. Hgt. about 6 ins. They thrive best in a rich soil and cool, moist, partially shaded location. Seed sown outside after frost will bloom in fall. For earlier blooms start inside and for extra early bloom start in the fall and carry over in a cold frame. When transplanting, cut back the tops if they are too spindly and tall. Picking blossoms regularly will give better plants for later bloom. If plants become untidy later, cut them back and they should bloom again. Our strains are imported direct by us from the most noted foreign Pansy Specialists and should give you unbounded satisfaction. Prices by ounce or larger quantities will be quoted upon application. 5020 Swiss Giants, Mixed

Swiss Giants are of recent introduction, coming direct from Switzerland. This mammoth New strain, often measuring $3\frac{1}{2}$ inches across, is composed of well-rounded, perfectly shaped flowers, thick velvety petals, with a multitude of harmonious and enchanting shades, colorings, and markings. It includes the richest reds, coppers, bronzes, and yellows, together with the delicate rose-pinks and those beautiful light blues so much desired in Pansies. One of the outstanding features of this wonderful strain is that the long, stiff stems hold the flowers well above the foliage; and the fact that the blooms retain their size almost throughout the season makes it most valuable as a cut-flower.

Pkt. 25 cts.; $\frac{1}{16}$ oz. 85 cts.; $\frac{1}{8}$ oz. \$1.50.

Select Spencer Sweet Peas

The Spencer Sweet Peas have been a striking advance in flower breeding. They have long stems and usually 4 gigantic blooms. Sweet Pea seed should be sown as early as possible in the spring. If convenient, prepare the soil in the fall, mixing in Bone-Meal or 4-12-4 Plant Food. In ordinary culture sow in furrow 3 to 4 in.

deep, covering seed 1 in. When started thin plants to 4 in. apart. When cultivating, draw soil to row, filling furrow. When plants are 12 to 14 inches high, nip out center to encourage branching. Give plenty of water and do not let seed pods form. Pick blooms daily by pulling toward the center. Do not cut them.

Livingston's Serial Picture Story—Continued from page 29

Livingston's vegetable trial grounds are your assurance of quality seed. Since 1850 these trials have progressed. Seed is tested for germination, productiveness, type, earliness, etc. Complete records are made and used as a guide in growing and placing contracts.

To the critical market gardener, who demands good seed, these trials mean much. They are large users of

"True Blue" seeds. Each year a large display of vegetables grown by these gardeners from this seed is exhibited at the Ohio State Fair so that others may become better acquainted with these choice products.

The Home Gardener can have the same grade of seeds for his garden as there is only one grade of "True Blue" seeds.

Choice Table Beets

Culture—The soil best suited for the culture of the Beet is that which is rather light, well fertilized. If wanted very early, sow in hotbeds and transplant; but for main crop sow in the spring, as soon as the ground becomes fit to work, in drills $1\frac{1}{2}$ feet apart, $\frac{1}{2}$ inch deep. For winter use, the turnip varieties may be sown as late as June and the seed covered 2 inches. When the plants are 3 to 4 inches in height, thin out so that they stand 3 to 4 inches apart. Keep free from weeds by frequent hoeing and hand-weeding if necessary. Before freezing weather sets in the roots may be stored in cellars or pits same as potatoes. Dry earth thrown over them before the straw is put on insures their keeping over winter.

One ounce of seed will sow 50 feet of drill; 5 to 6 lbs. to the acre

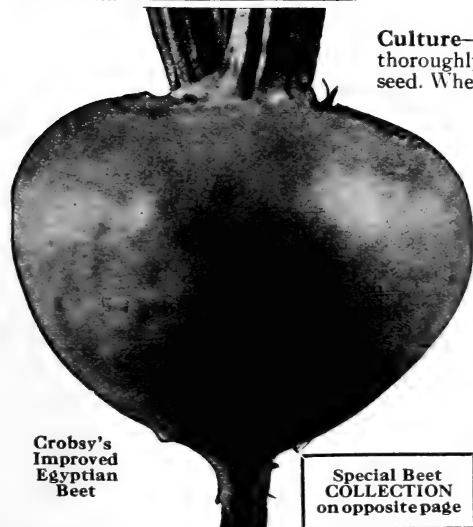

Detroit Dark Red. The most popular red turnip beet, not only for market gardeners but for home garden use, especially for canning. The tops are small, uniform, upright in growth, with deep red veins; roots are globular, smooth and very uniform in shape, color and quality; flesh is deep, bright red, zoned darker. 50 days. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.25.

Perfected Detroit. Received Award of Merit, All-America Selections, 1934. Superior to any variety yet introduced. Comes 90% true to exactly the same shade of dark red color and does not show any white rings. Tops are medium and their close, compact attachment leaves a larger portion of the root edible. Roots are globular, very smooth and uniform. Excellent for canning. Illustrated on page 6. 48 days. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

Early Wonder. A fine selection from Crosby's Egyptian, being a little smaller in size. Averages more full on the bottom and come a little earlier. The demand for Early Wonder is growing several hundred pounds annually. It is a turnip-shaped variety of very uniform type and is always smooth. Flesh is a beautiful deep red color, more uniform than Crosby, and is of excellent quality. Tops are small and erect and it may therefore be planted closer than most other sorts, thereby increasing yield. 50 days. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.25.

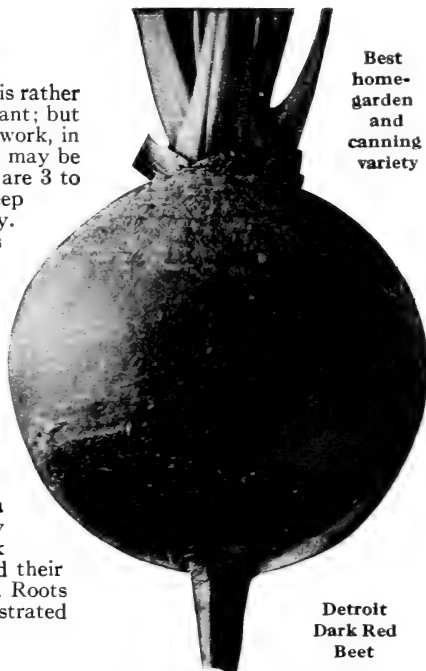

Crosby's Improved Egyptian. A very early, superior variety. Has few small tops and very small tap-root. Takes on its turnip shape in early stages of growth, making it much preferred for both first early crop and late sowing. Skin is dark red; flesh somewhat lighter. After boiling, it has a uniform bright red color and a delicious flavor. 45 days. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.25.

Marion Market Cabbage

Golden Acre Cabbage

Glory of Enkhuizen Cabbage

Mr. Howard Brubaker, Lawrence County, Ohio, writes: "My cabbage is up. I have a perfect stand and I sowed it so that thinning would not destroy too many plants. Those seeds certainly have the power to kick through their shell."

Grow Early Main-crop

Culture.—Cabbage does best in rich, mellow, well fertilized soil. For early, sow seed inside in a box or in hot-bed about 6 weeks before time to set outside. Transplant into other boxes later and harden off by gradual exposure outside. Transplant outside in April in rows 2 feet apart and 1½ feet in the row. Set plants down to the first leaf and do not cover the heart with soil. Cultivate often and deeply. For later Cabbage, sow seed outside when soil can be worked and transplant in about four weeks. Late Cabbage can be sown ½ inch deep in May and transplanted in July. Maturities given are from date of transplanting.

One ounce of seed produces about 2,500 plants
4 ounces produces enough plants to set an acre

Early Varieties

Copenhagen Market. A splendid extra-early round-headed sort which matures as early as the Wakefields and is of larger size. Practically every plant forms a perfect, tightly folded head averaging 5 to 8 pounds in weight. The compact growth of the plant, the solidity of the head, its excellent flavor, and extreme earliness—all combine to make Copenhagen Market one of the most popular early Cabbages. 66 days. Pkt. 10 cts.; ¼oz. 20 cts.; ½oz. 35 cts.; ¼lb. \$1.00; lb. \$2.75.

Marion Market. (Copenhagen Yellows-resistant.) Same type but resistant to yellows. Culture.—Sow in early spring in drills 15 to 18 inches apart, finally thinning the plants to 3 to 4 inches apart. If sown early on moist soil, a half-inch is deep enough to cover the seed. You Should Grow Cauliflower

Culture.—Cauliflower delights in a rich, moist soil, and in dry seasons should be abundantly watered, especially when heading. Sow the seed in the hotbed in January or February and transplant the plants 2 to 3 inches apart in boxes, or in another hotbed, until such time as they may safely be planted in the open ground. Set the plants in the field 2 feet by 15 inches apart. When heading tie the outside leaves loosely over the head to protect it from the sun.

One ounce will produce 3,000 plants.

Culture.—The Sweet or Sugar Corn varieties, being liable to rot in cold or wet ground, should not be planted until May, or when the soil has become warm and dry. For a full supply for the table during the entire season, plant every ten days or two weeks until the last week in July, in hills 2 by 3 feet apart for the early kinds, and 3 by 3 feet for the large late sorts, using four or five grains to the hill. Cover seed 1 inch. Give frequent and thorough cultivation all the season.

One pound plants 300 feet of row. 12 to 16 pounds to an acre
1½ pounds equals 1 quart, 12 pounds a peck, 48 pounds a bushel

Livingston's Home Garden

Culture—As soon as the weather has become settled and warm, plant in hills 4 to 6 feet apart each way, with 8 to 10 seeds in a hill; cover $\frac{1}{2}$ inch deep, smoothing the hill off with the hoe. Later, thin to 3 or 4 plants to a hill. For pickles, plant from June 1 to August 1. The fruit should be gathered when large enough for pickling, whether required for use or not, as if left to ripen on the vines, it destroys their productiveness.

One ounce of seed will plant about 50 hills; 2 to 3 pounds to the acre

Early Fortune. A fine variety of White Spine type. The fruit is of uniform size and shape and is of very firm texture, thus permitting long-distance shipping. Popular in South. Livingston's Leaf and Heading Lettuce

Culture—To grow Lettuce outside, sow the seed very thinly in rows $1\frac{1}{2}$ feet apart, covering seed $\frac{1}{4}$ in. deep with fine soil. This can be done as soon as the cold wet days of spring are past. With loose leaf varieties, thin to about 2 inches apart when a few leaves have formed and normal use will further thin the row as plants develop. Heading varieties should be thinned to stand 12 inches apart in the row.

For fine Lettuce in early spring, sow seed in a seedbed in September or October and protect thru winter in a coldframe. It can also be sown in a hotbed or in a house box in early spring; covered with damp blotting paper and kept moist until germination. Gradually expose young plants to the light and set out when soil is dry and moist. Cultivate to keep down weeds and conserve moisture.

One ounce of seed sows 100 square feet; plants 120 feet of row; produces 3,000 plants.

BLACK-SEEDED SIMPSON, PRIZE HEAD

One Heading Variety: LIVINGSTON'S CRISP-AS-ICE

1 pkt. ea. (value 25c) 20c; 1 oz. ea. (value 45c) 35c

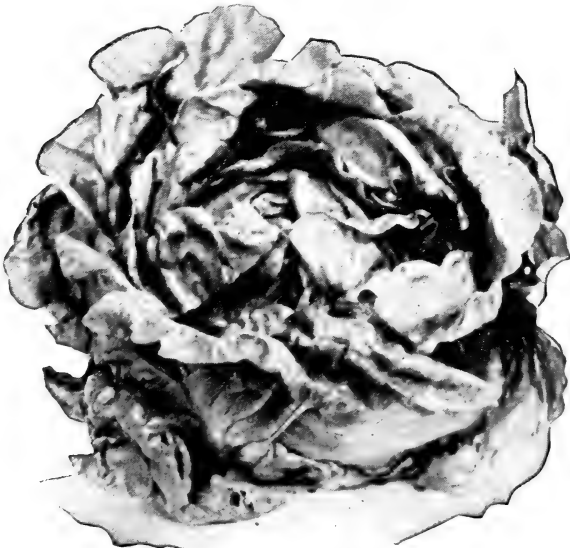

Grand Rapids Lettuce

Leaf or Loose Headed Varieties

Black-Seeded Simpson. The Universal home-garden variety. Forms a large, loose head of nearly white, curly leaves that are large, thin, very tender and of good quality. For home table use you can get no better. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.25.

Arlington Fancy Curled. A beautiful variety of the curly-leaf type. It resembles the best stocks of the Grand Rapids, but it is more beautifully curled. It is very true to type, of excellent quality, and for garnishing nothing in the Lettuce line excels it. Everyone should grow some of it, as it is one of those really good things that became popular favorites with the general public. It has a slight tendency to head, which makes it very crisp. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

EARLY CURLED SIMPSON. Forms a compact mass of curly leaves of light yellowish green, very tender. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.25.

Big Boston Lettuce

Grand Rapids. Especially adapted for greenhouse culture; also good to sow outside early in the spring. Our stock of this variety is extra fine as we pay more for it, and have it selected. It does not form a head, but makes large, compact bunches of light, attractively curled and fringed leaves. It grows very rapidly and keeps in good market condition for a long time after cutting. Should be sown more shallow than the other sorts, otherwise it may not germinate. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

OHIO GRAND RAPIDS. It is a dark-leaved Grand Rapids, and a quick grower. Especially adapted to midwinter crops in greenhouse. Very hardy. Not advised for home-gardens. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

PRIZE HEAD. Heads are large, light green tinged with brownish red, and of superb flavor. Even the outer leaves are crisp and tender. Extremely hardy. Very fine for home use but too tender to ship any great distance. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

Mrs. E. H. Hicks, Knox County, Ohio, writes: "I bought a package of Arlington Fancy Curled Lettuce in my order I gave you this spring. I find it to be the best lettuce I have ever raised."

Heading Varieties

Maturities given are from transplanting date.

Big Boston. (White-seeded.) This selected Lettuce is a very desirable large variety for forcing in coldframes and for outdoor planting. Plants large, hardy, vigorous. Leaves broad, smooth, thin, of a light green color. It forms good-sized heads and does particularly well during the cool fall and spring months. Superior quality. 50 days. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 40 cts.; lb. \$1.35.

White Boston. Forms a fine, large, solid, buttery head similar to Big Boston, but does not have brown edges on the outer leaves. The leaves are smooth and straight on the edges. The head has a light green color and blanches to a creamy yellow. Considered one of the best heading varieties. 50 days. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

(Continued on page 65)

Wonderful Lettuce

Wonderful (New York).

A truly wonderful heading variety. It is peculiar in having a dark green leaf when growing, but the head blanches to a light green with a center of creamy white. Heart is solid, sweet, tender, and crisp. This variety frequently weighs 2 to 3 pounds and has been known to grow to 6 pounds. Should be planted to avoid hot seasons for heading. 60 days. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 50 cts.; lb. \$1.75.

New York No. 12.

A new strain of New York. Perfectly round; solid and crisp; grows to a large size. Prefers cool weather and well fertilized soil. Matures early and is a sure header. 60 days. Pkt. 10 cts.; oz. 20 cts.; $\frac{1}{4}$ lb. 65 cts.; lb. \$2.00.

CHICKEN LETTUCE. Does not head but has stalks 3 to 4 ft. high which yield as much chicken-feed as any "greens" plant. When cut it starts to grow again. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

LIVINGSTON'S LETTUCE MIXTURE. One sowing produces salad for the season. Contains a grand assortment of Lettuces. Liberal pkt. 5 cts.; $\frac{1}{2}$ oz. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.

Sow seed very shallow in any good garden soil early in the spring, in rows $1\frac{1}{2}$ to 2 feet apart, and when well up thin out the plants so as to stand 8 to 10 inches apart. Several sowings a week or so apart give tender leaves throughout the season.

One ounce of seed will sow 100 feet of row

Sweet, Delicious Muskmelons Come

We Take Much Pride in the Quality

Livingston's Ohio Sugar Muskmelon

Culture—A rich, sandy soil and good seed are absolutely necessary for success in raising the best Muskmelons. The seed should not be planted until the ground has become dry and warm; plant in hills 6 feet apart each way; old, well-rotted manure should be thoroughly mixed with the soil in each hill and in liberal quantity. Put six to eight seeds in the hill and when danger from insects is past, leave one or two of the strongest plants only. Muskmelons or Cantaloupes may also be sown in rows that are made about 6 feet apart, and when the plants are well up thinned to stand in hills 5 to 6 feet apart, just before the plants begin to run. This method requires more seed but insures a good stand of plants in spite of the bugs. Cover seed 1 inch. Cultivate often and not deep.

One oz. will plant 60 hills; 2 to 3 lbs. will plant an acre.

Livingston's Tip-Top. Tip-Top in quality, appearance, and productiveness.

Introduced by us in 1892. This splendid melon has "held its own" for many years against all introductions in the melon line, and no yellow-fleshed melon of which we have any knowledge compares with it in good qualities. The testimony of all who have used **Tip-Top** is that every melon produced, whether large or small, early or late, is a good one—sweet, juicy, finest flavor, firm fleshed and edible to the outside coating. Its appearance on the market is very attractive—sells on sight. Customers soon learn to pick them out and will have no other variety. Fruit of large size, and flesh bright salmon in color; slightly oblong, evenly ribbed, moderately netted, very productive. 80 days. For Fine Flavored Watermelon's

**Improved
Kleckley's Sweets
Watermelon**

One of the most desirable varieties for home gardens and local markets. Note that it is a large, heavy, oblong type with very blunt ends; this feature being a big improvement over the old strain. It has bright scarlet flesh and a very solid heart. See prices below.

Culture—A light, sandy soil, with good exposure to the sun, is the best situation for Watermelons. The ground should be prepared deeply, but receive shallow cultivation. Hoe often and very thoroughly about the hills. If extra-large Watermelons are desired for exhibition purposes, leave but one or two on a single vine. Plant 1 inch deep in hills 8 to 10 feet apart each way, with a very generous shovelful of well-rotted manure mixed with the soil in each hill. If commercial fertilizer is used, it should contain a large percentage of ammonia and potash. Plant eight to ten seeds in each hill, and finally, when danger from insects is past, thin out to three strong plants. Watermelon seeds being large, an ounce is about right for small gardens.

One ounce of seed will plant 20 to 30 hills
4 to 5 lbs. will plant an acre

Stone Mountain or Dixie Belle. A very large, medium dark green, round melon of excellent quality. Flesh highly colored, very solid, with fewer seeds than most melons. Pkt. 10 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 35 cts.; lb. \$1.25; 5 lbs. \$6.00; 10 lbs. \$11.50.

Livingston's Choice

Culture—Onion seed should be sown as early in the spring as it is possible to get the ground in shape, even though the weather is cold. Thorough preparation of the soil is one of the most essential points in successful Onion-growing. They delight in a rich, deep, sandy loam, but excellent yields can be obtained from heavier soils properly fertilized. Sow the seed in rows 12 to 14 inches apart and about ½ inch deep. After they are well started, or about 3 to 4 inches high, thin out to stand about 2 inches apart, keeping them well hoed and free from weeds at all times throughout the season.

Quality Pumpkins

Large Sweet Pumpkin
Fine for home garden use

Culture—Pumpkins are not so particular in regard to soil as melons or cucumbers, but in other respects are cultivated in a similar manner. Sow in the month of May, when you plant your corn. Make hills the same as you do for squashes, but about 8 to 10 feet apart each way. Place about 8 seeds in a hill, cover 1 inch, and thin to 3 to 4 vines. It is preferable to grow Pumpkins in the field, and not in the garden, as they mix with the squashes and other vines. You can sow some among the late corn, putting in a few seeds, say every third or fourth hill. This will give you plenty for the table, and your stock the coming winter.

One ounce of seed will plant 15 hills; 3 to 4 pounds will plant an acre

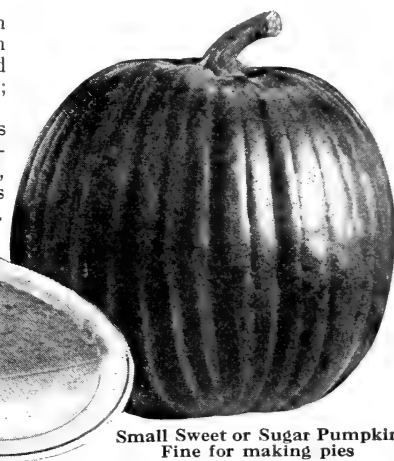

Large Sweet. (Kentucky Field). A large, round, flattened Pumpkin that is hardy and productive. It grows 1 to 2 feet in diameter and has thick orange flesh of extra-fine quality. A splendid sort for canning, and market use. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 20 cts.; lb. 60 cts.

Small Sweet. (Sugar). This is the small, sweet Pumpkin that has made the New England States famous for their Pumpkin pies. The flesh is very fine grained, most deliciously sweet-flavored, and a splendid keeper. It averages about 10 inches in diameter and is of deep orange-yellow color. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 25 cts.; lb. 85 cts.

MAMMOTH POTIRON. A really enormous variety (specimens often grow 2 feet in diameter and sometimes weigh 150 lbs.) with depressed ends and slightly ribbed salmon-color skin; flesh bright yellow. Great exhibition sort. Pkt. 5 cts.; oz. 15 cts.; $\frac{1}{4}$ lb. 45 cts.; lb. \$1.50.

COMMON YELLOW FIELD. (Yankee Cow; Conn. Field). Cultivated chiefly by farmers for stock-feeding and used some for canning. Very productive. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 20 cts.; lb. 60 cts.

Winter Luxury. Excellent for pies. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 25 cts.; lb. 85 cts.

Small Sweet or Sugar Pumpkin
Fine for making pies

Why Not Grow Some Peanuts?

Culture—Peanuts require rich, sandy soil. Plant 2 to 3 inches deep, with the hulls on, in rows about 3 feet apart, and about 10 inches apart in the rows. When ripe dig up the vines and hang up to dry.

IMPROVED LARGE VIRGINIA (Jumbo). It has the largest pods and more kernels with fewer imperfect pods than any other. Stands erect, easily cultivated. Vines make valuable forage for stock. Large pkt. 10 cts.; $\frac{1}{4}$ lb. 15 cts.; lb. 35 cts.; 3 lbs. \$1.00; 5 lbs. \$1.50; 10 lbs. \$2.75.

SWEET SPANISH. The earliest variety grown. Pods are small, well filled, and of fine quality. Large pkt. 10 cts.; $\frac{1}{4}$ lb. 15 cts.; lb. 35 cts.; 3 lbs. \$1.00; 5 lbs. \$1.50; 10 lbs. \$2.75.

Mrs. Mary I. Aldrich, Northampton County, Mass. writes: "I wish to inform you that your Orheart tomatoes excited the admiration of all my friends, all declaring they never had seen tomatoes of such wonderful flavor, such large size and so many on a vine in spite of a severe drought we had."

Mrs. Groom Myall, Clay County, Missouri, writes: "I want to tell you how very much I enjoy, treasure and am sure benefited by information contained in your catalog. To me it surpasses catalogs issued by any other firm that I have ever seen."

Mrs. M. E. Buck, Lee County, Iowa, writes: "I cannot say enough for your garden seed, they are wonderful. It seems as if every seed is good."

Livingston's Serial Picture Story — Continued from page 57.

These scenes are from Market Gardeners who are large users of Livingston's "True Blue" vegetable seeds.

At the left is shown Livingston's Globe Tomato being grown in the greenhouses of Wright Bros. They are large growers of select hothouse vegetables.

Next we have a large field of Parsnips being harvested by Al Butcher, a large market gardener who

has used Livingston's quality seeds for a long time.

In the third picture George Shirk and his son are shown in their field of Eggplant. They are specialists in growing this vegetable and have been large users of "True Blue" seeds for several years.

At the right Charles Fishel is harvesting a fine crop of Livingston's Colorite Cucumber.

Little Marvel Peas

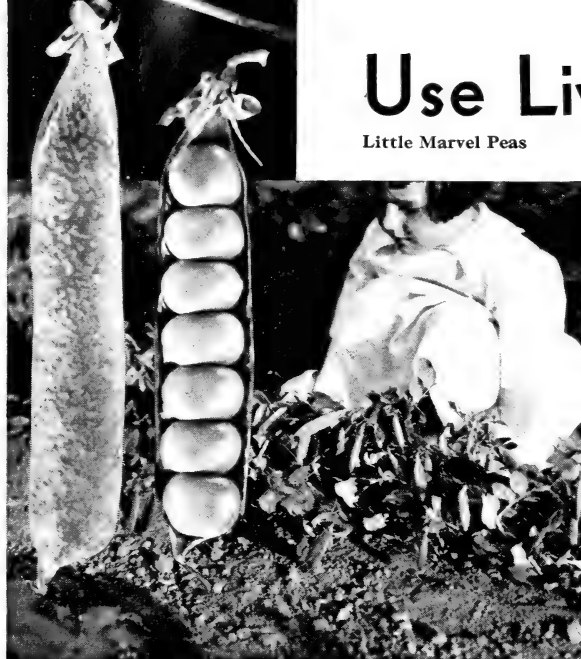

We Pay Transportation on Peas. See Page 1-B

We cannot supply less than 5 lbs. of any one variety at the 5 lb. rate, neither can we supply 5 lbs. made up of two or more varieties at the 5 lb. rate.

Culture—Peas thrive best in a rich soil and moderate temperature. Smooth seeded varieties are extremely hardy and can be planted quite early about 2 to 3 inches deep. Wrinkled varieties are not so hardy but are of superior quality. They should be planted when the ground is warm and dry and if they are planted quite early they should be covered only 1 inch to prevent rotting in the ground.

For dwarf varieties make the rows 20 to 30 inches apart and for tall varieties make them 30 to 36 inches apart. The seed should be placed 1 to 2 inches apart in the row. In the home garden, double rows, 6 inches apart, with brush or trellis between is ideal for conservation of space. Cultivate often and gather the crop as rapidly as it is fit for use. Successive sowings will provide food over a longer period.

Two pounds sow 100 feet of row; 75 to 100 lbs. an acre; 2 pounds equal 1 quart, 15 pounds 1 peck, 56 pounds 1 bu.

For Economy Grow Your Own Pepper

Harris Early Giant Pepper

Earliest Large-fruited Variety

California Wonder Pepper

Culture—Peppers should be started in a hotbed or coldframe and transplanted about the end of May into a sunny corner of the garden, in rows about 2 feet apart, with the plants about the same distance between them in the rows. They can be sown $\frac{1}{2}$ inch deep in open ground in a seed-bed when all danger from frost has passed and the weather has become settled and the soil warm. When the little plants are about 3 inches in height, transplant as above into the rows where they are to remain. Some very rich fertilizer, stirred into the soil when the plants are about 6 inches high, will be beneficial. Maturities given are from transplanting dates.

One ounce of seed will produce about 1,500 plants
5 to 6 ounces to an acre

Mr. Alexander W. Livingston, pioneer of the modern tomato and founder of our Company, introduced the first modern tomato, his "Paragon," in 1870. This was the beginning of Livingston's supremacy in Tomatoes and the now world wide demand for this luscious vegetable.

Use Livingston's High Tomato Culture

In this locality, for very early fruit, the seed should be sown in a hotbed about the first week in March, in drills 5 inches apart and $\frac{1}{2}$ inch deep. Later sowings may be made until the last of April. You can approximate your sowing date from this according to your location. (Sufficient plants for a small garden can be started by sowing a few seeds in a shallow box or flower-pot and placing in a sunny window in the house.) When the young plants are about 2 inches high, they should be set 4 to 5 inches apart in another hotbed or coldframe, or transplanted into small pots, allowing a single plant to a pot. Expose to the air as much as possible to harden them for planting out. Water freely at the time of transplanting in the open ground and shelter from the sun a few days until the plants are thoroughly established. Cultivate as long as the vines will permit, but the last two or three workings of the soil should be very shallow. The use of fertilizer, high in potash, makes tomatoes more solid and tends to keep them from cracking.

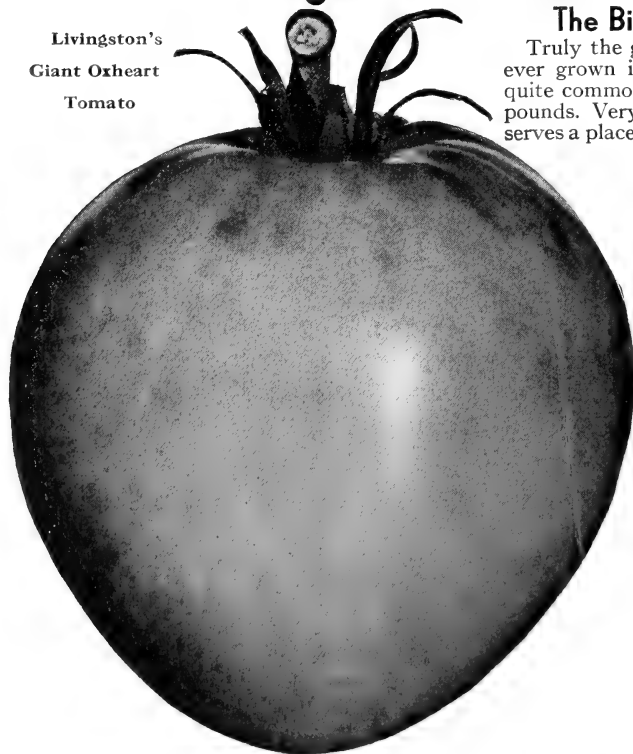

Tomatoes grow splendidly trained to stakes or trellises. The fruits are of better quality and appearance and ripen earlier. This method is common with market gardeners and is practiced by private gardeners where neatness and conservation of space is desired. The usual method is to set one strong plant to a stake 5 to 7 feet high, tying the plant up with wool or other strong, soft twine, and pruning quite freely as the vine advances in growth. By this method plants may be set much closer than in the ordinary way. Ask for Tomato Booklet giving more detailed instructions. **About 2,000 plants will be produced from one ounce of seed. 4 ounces will plant an acre. Maturities given are from the time plants are placed in the garden to first ripe fruits.**

Its attractive shape, large size and excellent table qualities has brought it into deserved popularity with all who have grown it. Rich soil adds greatly to its productiveness. Late variety. 87 days. **Selected seed, grown by us.** Pkt. 10 cts.; $\frac{1}{4}$ oz. 30 cts.; $\frac{1}{2}$ oz. 55 cts.; oz. 85 cts.; $\frac{1}{4}$ lb. \$2.50.

Introduced by us in 1929 (Oxheart Type).

A new variety of our Oxheart-type Tomato. All our customers who are familiar with Livingston's Oxheart, and who did not try this new yellow one last season, should give it a trial this year. It is of the same shape as the original, but the skin and flesh are a rich shade of yellow. A platter of slices of the Yellow Oxheart, mixed with slices of the original Pink Oxheart, makes an appetizing dish. Try it. Illustrated in color on inside back cover. 85 days. Pkt. 15 cts.; $\frac{1}{4}$ oz. 40 cts.; $\frac{1}{2}$ oz. 60 cts.; oz. \$1.00; $\frac{1}{4}$ lb. \$3.00.

Tomato Types

The Livingston Seed Co. introduced the first modern tomato "The Paragon" in 1870. Since that time more than 30 other varieties have been developed and introduced by us. This supremacy in Tomatoes has enabled us to rather definitely fix and define types. Practically every tomato in cultivation today comes under one of the types as illustrated here. To better assist you in determining tomato shapes, we are designating under each variety offered, which type it is.

Livingston's Pink Tomatoes

Livingston's Globe Tomato

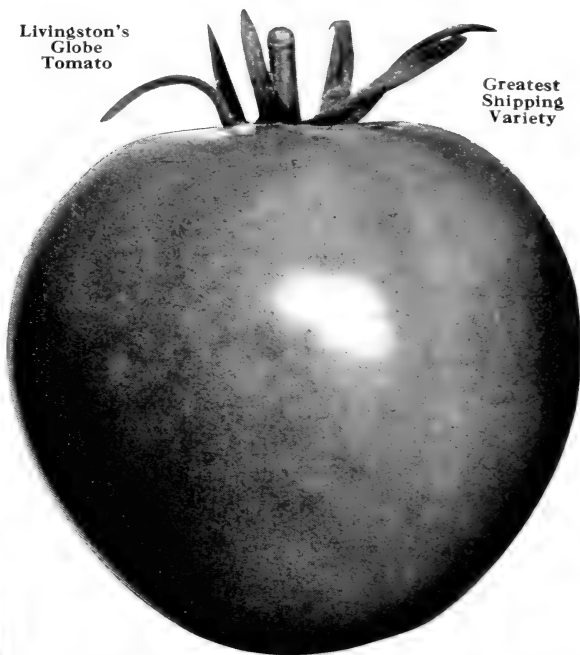

Introduced by us in 1905 (Globe Type)

We feel quite safe in saying that no Tomato ever introduced has been so valuable to the southern growers and shippers as Livingston's Globe. Literally train-loads are shipped out of Southern States each season.

As a greenhouse sort, it is not excelled by any other pink variety and it is one of the best for the home-garden. It comes into bearing early and keeps on bearing almost until frost. Fruits are large and smooth with firm flesh that ripens evenly; color, a fine glossy rose, tinged with purple. Quality good, being mild, pleasant and of delicious flavor. Almost blight-proof. Main crop variety. 65 days. **Genuine Livingston-grown seed.** Pkt. 10 cts.; $\frac{1}{2}$ oz. 25 cts.; oz. 45 cts.; $\frac{1}{4}$ lb. \$1.35; lb. \$4.00.

Mr. Gurney McDowell, Lawrence County, Indiana writes: "Have had wonderful success with tomato seed I bought of you, especially the Stone and Burbank. They are wonderful yielders and come in clusters of fine smooth tomatoes and have also stood some awful dry and hot weather."

Mr. Ernest V. May, Shenandoah County, Virginia writes: "You may be famous for tomatoes—but your tomatoes are more famous than you are, especially your Oxhearts. I have grown your Livingston Beauty for over thirty years. Not a grumble in 30 years with any of your seeds."

Mr. Cordie Adrian, Rogers, Michigan, writes: "The reason for me ordering another order of Tomato Seed is that so many of my friends have asked me to get them the seeds like I had last year as they were amazed at the success. It pays to buy good seed."

Grow Turnips for Two Purpose Crops

Culture.—Turnips serve the double purpose of summer greens and useful roots. Early varieties should be planted as soon as the ground is dry in spring. Sowings of these and other later ones can be made as late as August. Early sowing should be in rows 12 to 15 inches apart, covering seed $\frac{1}{2}$ inch and thinning to 4 to 6 inches apart in the row. Cultivate often and thoroughly. Late sowing can be broadcast rather than sown in rows.

One ounce of seed will sow 100 feet of drill;
One to two pounds will plant an acre

Extra-Early Purple-Top Milan. Roots are flat and an attractive purple-red on the upper portion. Tops small and upright and are therefore well adapted for forcing. The Milans are the very best for extra early, and their quality is fine. Very smooth and almost transparent skin. 47 days. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 30 cts.; lb. \$1.00.

EXTRA-EARLY WHITE MILAN. Same as Purple-Top Milan except in color. 47 days. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 30 cts.; lb. \$1.00.

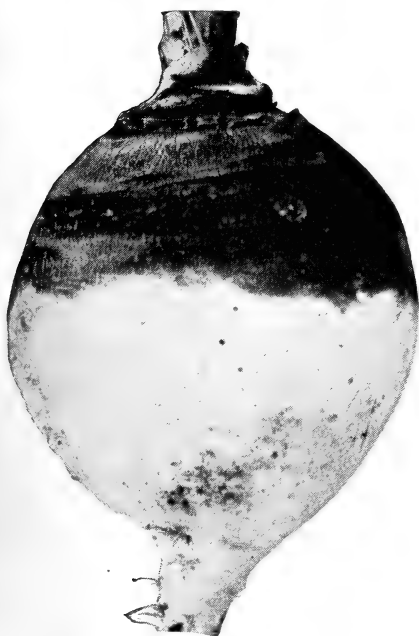

Purple-Top Strap-Leaf. Comes next to Purple-Top Globe in popularity. An early variety, very extensively used for the table. Leaves are few and upright in growth. Roots flat, of medium size, purple or dark red above ground, white below; flesh white, fine-grained, and tender. 56 days. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 25 cts.; lb. 75 cts.; 5 lbs. \$3.50.

Japanese Shogoin Turnip. It is the best combination variety for both bulbous roots and Tops for "greens" we have yet seen. The roots are white, semi-globe shaped, very sweet and mild. The tops or leaves are large, thick, juicy and stand erect. This variety is louse resistant and thrives even in the hottest dry weather. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 25 cts.; lb. 85 cts.

GOLDEN BALL or Orange Jelly. Rapid grower; globe-shaped; bright yellow. Best yellow sort for table use. 60 days. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 20 cts.; lb. 70 cts.

Long White or COW-HORN. Long; grows partly above ground; slightly crooked; white, fine grained, very sweet. Sometimes used for plowing under to improve the soil. 70 days. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 20 cts.; lb. 65 cts.

Early White Egg. A variety with white flesh, firm, fine-grained, mild and sweet. 49 days. Pkt. 5 cts.; oz. 10 cts.; $\frac{1}{4}$ lb. 20 cts.; lb. 65 cts.

Rutabaga

Livingston's Lawn Grass Seeds

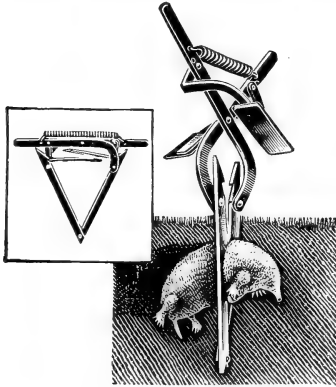

TREAT YOUR LAWN WITH THE BEST THIS YEAR
YOU'LL BOTH LIKE OUR MIXTURES MADE FROM TRUE TURF GRASSES

Your first consideration in a lawn seed mixture should be the "kind of Grass Seeds used." There are hardy, perennial grasses and annual nurse grasses. It is the hardy grasses that ultimately make a good lawn and the large percentage of any good mixture should consist of these perennial grasses, such as Kentucky Blue Grass, Red Top and Chewing's Fescue. The annual grasses are necessary as a nurse for the better grasses

Thoroughly practical leaflet, "How to Make a Better Lawn," sent on request

but if used to excess do not benefit your lawn, although the mixture sells for less money. Therefore, do not be deceived by the price per pound. If you must choose between quality and quantity, and most of us do these days, choose quality in lawn seed and get some real satisfaction. Let us suggest that you use our famous "Capitol Brand" Mixture this year. You will be pleased with the results.
